Instruments that have been developed:

The CDI- Word & Gestures (“orð og keipur) and CDI-Word & Sentences (orð og setningar) are adapted to Faroese in the long forms. The age range is 8- 20 months for CDI I and 16 to 36 months for CDI II. The data were collected through the Internet and the final data set includes 1.135 children and is cross-sectional.

The instruments will be available to others hopefully in 2018. There are vocabulary norms available as well as a manual is to be developed. Information on how they may be obtained will be available on this site. There are no other CDI- instruments under development, but the data for all parts of the forms are collected and it is possible to create norms for them.
